istock

## Introduction

Woods and trees face an uncertain future across the UK. However, one thing we can be certain of is that the UK is one of the least wooded countries in Europe, with only 13% coverage compared to a European average of 37%. Trees and woods continue to disappear from our landscapes at such a rate that it could leave the UK facing potential deforestation.

We now know more than ever about all that woods and trees do for us. Research carried out by Europe Economics for the Woodland Trust placed the total value of services provided by woods and trees to society at £270bn. Native trees provide many public benefits (ecosystem services), such as improving physical and mental health, air quality, water quality, water management (reducing flooding), soil retention, agricultural productivity, shading, cooling (through evapotranspiration) and oxygen production, as well as the more obvious benefits of improving biodiversity and carbon sequestration.

The importance of woods and trees has been amply illustrated by many organisations in recent years, including the Natural Capital Committee

(NCC) and most recently the Office for National Statistics (ONS). In the NCC's third report it found a strong economic case for planting large areas of trees in the right places. It estimated that 250,000 hectares planted close to towns and cities can generate societal net benefits in excess of £500m a year. Meanwhile the ONS has stipulated that woods are the most valuable form of carbon sequestration in the UK and absorb more than £1.8bn of carbon dioxide every year. The Committee on Climate Change's 2019 report<sup>1</sup> on combatting global warming called for woodland cover in the UK to increase to 17% by 2050, and we're currently a long way off that target.

It is vital that the Government's plans for nature, including any investment decisions across Government, reflect such evidence.

The Woodland Trust aims to bring the benefits of native woods and trees to all. From protecting and restoring our ancient and richly diverse existing woodland habitats to creating new green spaces and access to woods, our vision is a UK rich in native woods and trees, enjoyed and valued by everyone.

## The data explained

Over the last four decades, the Woodland Trust has planted hundreds of woods and millions of trees. We have built up an inventory of ancient and veteran trees, and fought threats to ancient woodland from development proposals. Our schools and community tree pack scheme has enabled thousands of people to improve and cherish green spaces, while our work continues to champion the case for improved access to woodland. But with your support we can achieve much more. This document tracks how woods and trees fare within parliamentary constituencies across Britain against a number of key indicators. It is intended to be a useful starting point and inspiration for further discussion around how to better protect and promote woods and trees across the country.

The data presently available includes that for England, Wales and Scotland. However, all of the work detailed within this document applies across the whole of the UK, including Northern Ireland.

## Ancient woods under threat

Ancient woodland is our richest terrestrial habitat for wildlife. It is home to more threatened species than any other, and represents the last fragments of the wildwood that once cloaked our country after the last Ice Age. Now ancient woodland has been reduced to a fraction of its former extent and covers only 2% of the UK. It is increasingly under threat from development in the form of housing, infrastructure and HS2, and keeping abreast of planning applications registered across the UK is becoming even more challenging.

The Woodland Trust's Woods under Threat team consists of three members of staff who respond to over 150 cases of threats to ancient woodland each year. This is complemented by a network of

volunteers who monitor threats to ancient woodland locally and assist in building the case to save them. Our resources don't presently allow us to check and respond to every application from all the local planning authorities in the UK. Our Woods under Threat database only records the threats that we know about. It is therefore simply a snapshot of the various threats to ancient woodland of which we are aware and does not claim to be the complete picture; however, to our knowledge it is the only one of its kind. This document uses Woods under Threat data from the eight-year period July 2011-19 and illustrates why we need to ensure local planning authorities use the strengthened planning protection.

## Tree packs for communities and schools

The Woodland Trust provides tens of thousands of tree packs to participating school and community groups in November and March each year, when the saplings are ready to plant. They offer the perfect opportunity to bring people together while encouraging beautiful wildlife, community involvement with nature and many other benefits to local areas. Our data shows how many tree packs were supplied to constituencies in Britain in 2018.

You can apply for our tree packs online and any enquiries about the scheme can be directed to us by email: [communitytrees@woodlandtrust.org.uk](mailto:communitytrees@woodlandtrust.org.uk)

## Access to woodland for all

Compelling international evidence is demonstrating what many people know intuitively: that woods and trees are an essential part of life, and something we need more of. Access to woodland has been shown to have social and economic benefits such as improved health and wellbeing, improved air quality, the promotion of social cohesion and increased inward investment and property values.

This documents sets out the percentage of the population in each constituency that meets the 'Woodland Access Standard', though it should be noted that the woodland itself may fall within a bordering constituency boundary. The data is taken from the research used to compile the updated

Woodland Trust publication *Space for People: targeting action for woodland access*.

According to the Woodland Access Standard (endorsed by the Forestry Commission), no person should live more than 500m from at least one area of accessible woodland of no less than 2ha in size. There should also be at least one area of accessible woodland of no less than 20ha within 4km of people's homes. This is intended to be an aspirational benchmark and some flexibility and local assessment is needed in its interpretation.

Currently only 18.2% of the population of Britain lives within 500m of accessible woodland.

The amount of woodland recorded as accessible has changed over time, owing to improved data and woodland created by the Woodland Trust and others.

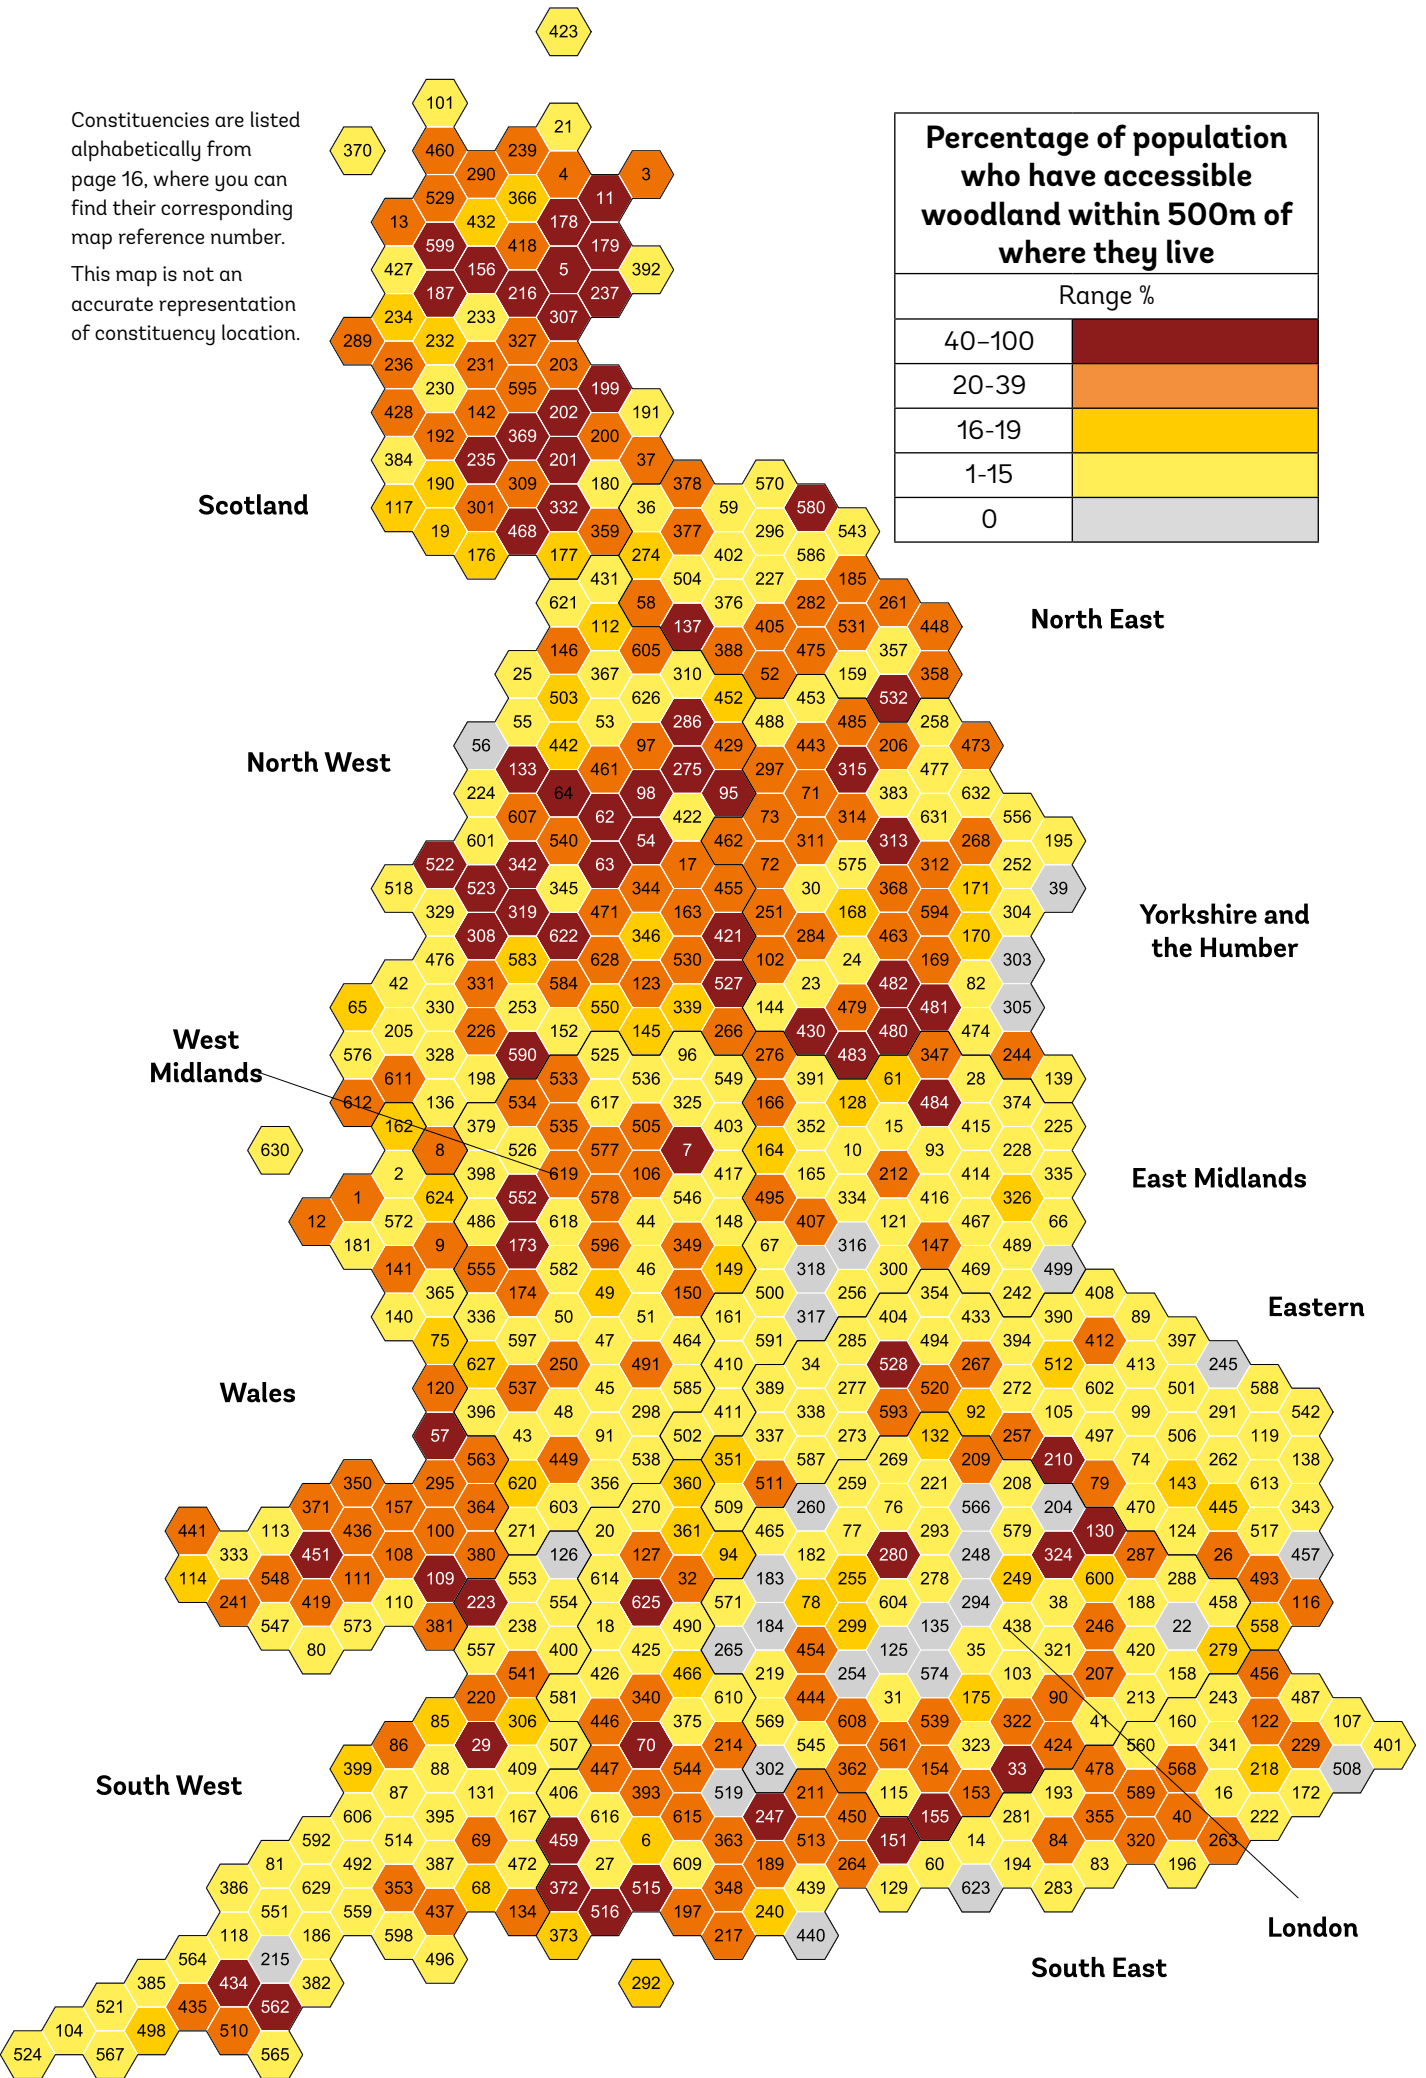

Jill Jennings/WTML

## Woodland cover

The national average for woodland cover in the UK is only 13%, compared to an EU average of 37%. Yet despite the evidence that planting more trees can help tackle some of the great policy challenges of our time, current figures show planting rates are falling well behind Government ambitions. In England just 1,400ha of new woodland was planted in the 2018-19 planting season – falling far short of the stated aim to plant 5,000ha a year.

In Scotland 11,200ha were planted, bucking the UK trend, while Wales and Northern Ireland saw 520ha and 240ha planted respectively<sup>2</sup>. Increasing native woodland cover should be a priority to improve quality of life while providing value for money by delivering on a range of policy priorities simultaneously.

The Woodland Trust has created thousands of hectares of new woodland across the UK on its

own land, and we work with others to help them create new woods or enrich their local landscapes with trees. There are many competing demands on the nation's land. However, integrating trees and woodland into urban areas or farmland can bring great benefits such as urban cooling, shade and shelter, minimising runoff from fields and reducing the impact of flooding. As the UK begins to withdraw from current CAP arrangements and reassesses how it pays landowners, it should consider these additional benefits as a means to improve the value of tree-planted land.

Street trees, trees in hedgerows and small copses or shelterbelts all contribute to creating more resilient landscapes. The data shown in this document for woodland cover in Great Britain is taken from the National Forest Inventory.

Woods are particularly valuable in urban areas where their visual prominence creates a balance between the built and natural environment.

## Ancient and veteran trees

Ancient and veteran trees are living relics that inspire awe and mystery. They have shaped history, enrich local culture and heritage, and support rare wildlife species. The number of ancient trees in the UK is exceptional compared with elsewhere in northern Europe. So far, more than 120,000 records of the nation's ancient, veteran and other notable trees have been added to the Ancient Tree Inventory (ATI) – a live database updated by a network of expert volunteer verifiers. However, there remain many ancient trees still to be discovered and recorded, and this growing database will give us a much better understanding of the number of ancient trees across the UK.

There is an increasingly compelling case for a national tree register which will recognise, celebrate and protect the UK's Trees of National and Special Interest for the rest of their days. It would also help owners of these special trees (like local authorities and private landowners) access support, such as

specialist advice and grants, so the trees can be cared for as they become even older and grander.

The number of ancient and veteran trees shown by constituency gives an indication of the spread of these remarkable trees, though significant numbers are yet to be recorded.

## Ancient woodland

Ancient woodland of over 2ha is recorded separately on the Ancient Woodland Inventory (AWI). Thanks to lobbying by the Woodland Trust, the Ministry of Housing, Communities and Local Government (MHCLG) has added £210,000 to a joint Woodland Trust/Natural England project to update the AWI in England to include smaller fragments of ancient woodland. This will provide a more accurate picture of ancient woodland cover across the UK, and avoid conflicts and delays in the planning process.

## What next?

We hope that you've found the information in this document of use and that it has highlighted at least some of the issues that the Woodland Trust is keen to address: protecting ancient woodland and veteran trees, how to create new accessible woodland for communities and schools, the marked variations in woodland access for all, the low level of woodland cover and the declining number of ancient and veteran trees.

If you're an MP or Councillor, we'd like you to consider what you could do next to help the plight of trees and woods in your constituency/ward. Are there policies you can influence or implement, commitments you can make or even ideas you'd like to discuss?

But it's not just about planting more native trees. It's also about protecting, restoring and maintaining the ancient woods and veteran trees we have already, and allowing them to naturally regenerate and expand at their own pace.

If you think trees and woods can make a difference to your community then get in touch with us at [\*\*governmentaffairs@woodlandtrust.org.uk\*\*](mailto:governmentaffairs@woodlandtrust.org.uk)
